

Nicole Ortiz  
Programming Assignment 1  
IT 114 - Adv Programming For IT  
5 October, 2018

## Documentation Write Up

### 1. Formulating the Problem

#### 1.1 Problem Description

Design and implement a Java program to create a system that will keep track of books in a local bookstore. The program will maintain a current list of books that can be purchased in a bookstore and ask the user if they would like to order the book if it is not in stock. Book data for the program includes the author's first and last and an array of books written by the author which will contain name of book, isbn number, price and genre. Each author can have a maximum of five books.

#### 1.2 Verbalization

*What is the goal?* Create a system that keeps tracks of books in a bookstore

*What are the givens?* The max amount of authors and books per author

*What are the unknowns?* None

#### 1.3 Information Elicitation

*Goal* Sort book info and authors

*Givens* How many and books to manage

*Unknowns* The exact number of books / authors

*Conditions* None

### 2. Planning the Solution

#### 2.1 Solution Strategy

Ask the user first whether to see all books/authors, or search by author. If first, print out all books. If second, user enters a name and it is searched for. Results are printed.

#### 2.2 Goal Decomposition

*Sub-goal 1* Check if should print all books or search

*Sub-goal 2.1* If print all; print all books

*Sub-goal 2.2* If search, use user input and compare to list

*Sub-goal 3* Print all search results, if none ask if want to order (add to list)

### 2.3 Resources

*Relevant Commands* Array, Book Object, Search loops, System input

*Command Breakdown* Array of books and authors. Book Object for each book that is in the library (can create more). Search loops to iterate through the array when finding author. System input to attain what the user wants to do and their input.

### 2.4 Data Organization and Description

Input (givens):

Name	Description	Origin	Used in Sub-goal #
all	Prints complete author/book list	User	1
find	Brings to initial search page	User	1
z	Author's name (search)	User	2.2
newAuthor	Creates new book object	User	3

Output (unknowns):

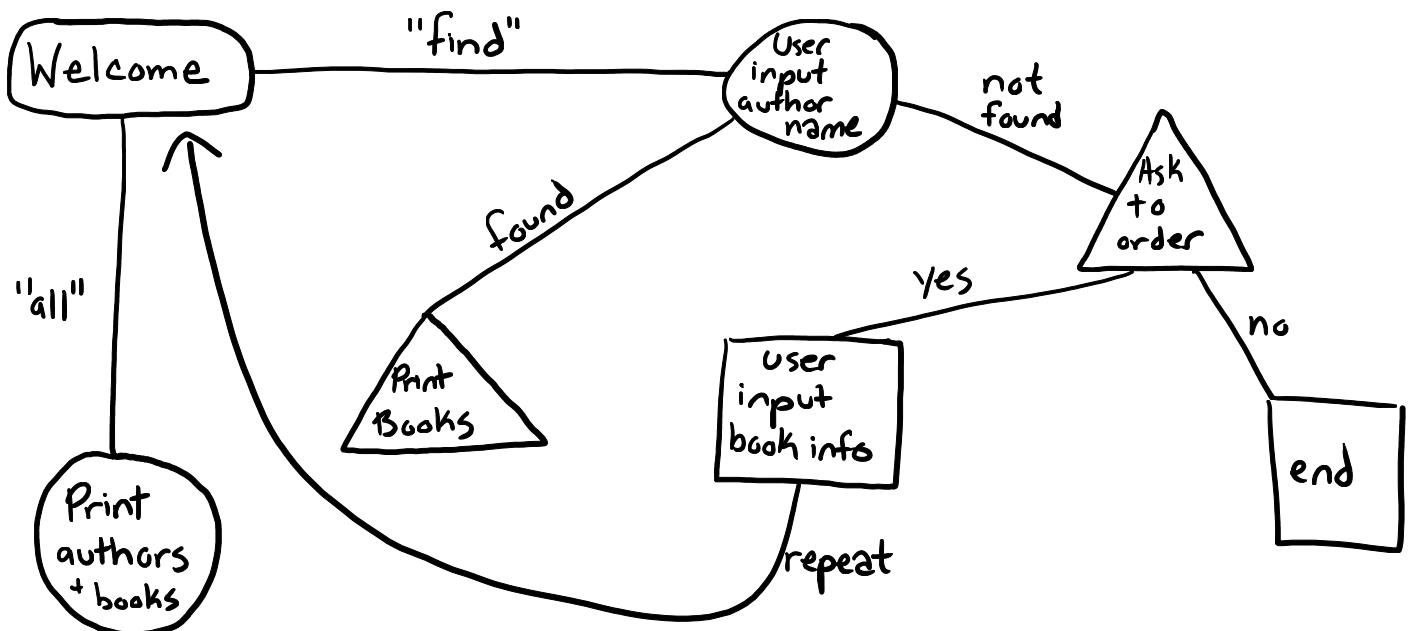

Name	Description	Origin	Used in Sub-goal #
authors	Array of author's names	Screen	2.1 / 2.2
books	Array of books	Screen	2.1 / 2.2

## 3. Designing the Solution

### 3.1 Structure Chart

*First Level Decomposition*

The first level decomposition shows the broad outline of the whole program. The three main steps in solving this problem are (a) getting the inputs, (b) doing the actual conversions and (c) displaying the results

### **3.2 Module and Data Specifications**

**Name:** Welcome - Display instructions to the user

**Input:** None

**Output:** None

**Logic:** 1st user decision: Display all or search authors

---

**Name:** SelectInit - Directs Welcome choice to correct route

**Input:** None

**Output:** None

**Logic:** Processes Welcome's choice, directs user to next screen

---

**Name:** Inventory - Displays bookstore inventory (authors & books)

**Input:** None

**Output:** authors, books

**Logic:** Displays authors and corresponding books

---

**Name:** Search - Displays instructions to user on search

**Input:** String

**Output:** authors, or order book message

**Logic:** Searches authors for inputted String

---

**Name:** UpdateStock - Adds Book Objects to books array

**Input:** Book Object

**Output:** None

**Logic:** adds to books & authors

---

**Name:** NewAuthor - Asks user for Book Object info

**Input:** Strings, int, double

**Output:** None

**Logic:** creates new book object (to be used in UpdateStock)

---

**Name:** BookStock - Used for program testing

**Input:** None

**Output:** None

**Logic:** creation of multiple book objects

---

### **3.3 Algorithm**

#### *Algorithm Description*

First the program asks the user whether to print all books and authors saved or to search for an author. If the user chooses to print all books, all authors and their corresponding books are printed. If the author chooses to search, they are asked to input the author's name. If the author's name is found, their books and information are printed. If not found, the user is asked if they want to 'order' the book. If yes, user inputs book data. If no, program ends.

## 4. Translation

### 4.1 Source Code

Please refer to the included folder labeled 'Source Code' for the main java file Bookstore.java and the book class Book.java

### 4.2 Program and Module Description

**main** Welcomes the user to the program; initializes books and authors arrays; runs bookStock (for testing); runs welcome

**welcome** Prints out the user's initial choices to print all books or search for author by name. Sends choice to selectInit

**selectInit** Switch. Processes choice from welcome, and redirects user to either inventory, search, or back to welcome.

**inventory** Goes through authors array and prints out each author and the corresponding book info from books

**search** Asks user for String of author's name. Goes through authors array. If found, print out all book information from books. If not found, ask user if they want to order the book. If yes, run newAuthor. If no, end program. If error, run search again.

**updateStock** Adds book Object to books array & corresponding author to authors array.

**newAuthor** Asks user for book object information. Sends author name and book object to updateStock.

**bookStock** Creates various book objects for program testing

## 5. Solution Testing

**Test the program by running through all scenarios:**

Ask for complete list of authors; Ask for author search (with real author & new author); Create new author

## 6. Testing: Output

**Print List of authors & books**

```
C:\Users\Nicole\Desktop>java -jar "Bookstore.jar"
```

```

### Search for an author in the list

```
C:\Users\Nicole\Desktop>java -jar "Bookstore.jar"
Welcome to the Bookstore!

*****
Would you like to
  (all) See a list of all authors and books?
  (find) Search for a specific author?

*Please type the command found in {} to select an option
*****
Choice: find
*****
Search By Author
      Enter An Author's Last Name: Seuss
*****
Results:
      Author: Dr Seuss
      Title: The Cat in the Hat
      ISBN: 2
      Price: 5.25
      Genre: fiction
---
      Author: Dr Seuss
      Title: Breen Eggs and Ham
